Hi Sharon,

First and foremost thank you all for coming our way yesterday. I can see this is a hot button in Kingman and Mohave county because so many showed up or sent emails. I would just like to say with or without the data, if you use common sense we are going to be in trouble if we do not address this issue. Talked with the Pistachio farmer last night and according to him they planted desert friendly trees and after a few years will not need much water but if we do not monitor the usage from the wells than how do we know for sure. This is a problem for most of West coast and there is no River water for us that is for sure so lets get on this now and have a bit of control over it. Please encourage the director to define this and get onto it, I also noticed it is against the law for a company that is not owned or ran in the US to drill and use our ground water so wondering why this alone could not stop the ag drilling in our area. We are a desert area after all so we really need to treat it like so. California did not and are in real trouble and pulling all of us down with them.

Thank you CC

Carol Carlson
