Good afternoon Ms Scantlebury, my name is Bryan Milam. I am a Kingman resident, and I am writing you about the water problem in Kingman Az. This is in regards to the meeting held in Kingman a few days ago.

There is a resolution to Kingmans water issue and I have a new way to attack this problem, with very little initial cost that is modular and scale able to fit any sized city's needs. There is much to tell you, and it will not fit in this letter. If you would like to meet or talk on the phone I would be happy to show you how the new system works. In addition Kingman will not need a new sewer pipe exit location, as there will no longer be a need for an exit for any waste. Please contact me, I have a full solution from solid waste to plastic recycling to energy production and new farming methods for the future of Kingman and hopefully, Phoenix, Havasu, Bullhead and many others.

I will be available this Thursday the 29th to meet with you please if you can bring with you an electrical engineer a water department engineer and a chemical engineer so they might be able to translate what I am saying in terms we can all understand. Or I am able to come to you. Should only take an hour of your time.

Thank you,  
Bryan Milam
