I am against the implementation of a subsequent irrigation non-expansion area In the Hualapai valley Ground water basin. The USGS studies of the Hualapai Valley ground water basin show that there is sufficient ground water to provide a reasonably safe supply for irrigation of the cultivated lands in the area at the current rates of withdrawal. I am the primary water operator for two public water utility companies within the Hualapai ground water basin. All of my wells have shown either a stable static water level or an increase in the static water level. There is no justification for the establishment of a subsequent irrigation non-expansion area in the Halapai valley ground water basin. I asked that you please do not implement a subsequent irrigation non-expansion area at this time.

Thank you,

Mike Neal
