New Turf/Planted Acres Application Rate Calculation:

\[
AF \text{ Per Acre} = \left( \frac{Maximum \text{ AF Per Hole}}{5^x \text{ Acres Per Hole}} \right) \times \frac{Actual \text{ Acres Per Hole}^x}{Actual \text{ Acres Per Hole}}
\]

* Formula which makes the application rate a function of the acres per hole:
  * Less acres per hole translates to a higher application rate.
  * \(x\) is a factor which determines the rate at which the application rate changes as the actual acres per hole changes.
