

Drought Status Report

June 2014

June was dry in most areas of the state as we awaited the start of monsoon activity. Fire danger remained high statewide into the 4th of July holiday weekend. Severe drought expanded in southeastern Arizona, moving into northern Graham, northern Greenlee, and southern Apache counties. Western Pinal also saw expansion of severe drought. In northern Arizona, severe drought was introduced into Yavapai County.

A sharp increase in humidity in early July should help ease the fire danger, as the monsoon gets into full swing. .
